GASOK ACCELERATING

VISION

**In momment., you don't bet on events.  
You bet on people.**

In Korea, where community is everything — predict what captures attention,  
build content that drives it, and turn that into **economic reward**.

**That's momment.**

# Prediction markets are exploding globally. But Korea has no path in.

## \$1T Market by 2030

Polymarket hit \$22B in 2025. Kalshi earned \$263M in fees. ICE invested \$2B. Yet in Korea, prediction markets are illegal under gambling law.

## Korean Events, No Oracle

K-pop, KBO, elections, Samsung earnings are already traded on Polymarket — but UMA voters can't read Korean. Chainlink can't handle judgment data.

## The Core Dilemma

Give money → it's gambling → illegal. Give nothing → users don't come. How do you incentivize participation legally?

Prediction markets have massive power — but in Korea, the path must avoid speculation entirely. **momment. solved this.**

# momment. = Prediction + Social + AI Oracle

Users are rewarded not for "guessing the future" (= gambling), but for "accurately reporting facts that already happened" (= service contribution).

## Social-Fi Layer

Attention-cluster communities. Posts, debates, follows, feeds. Creators build audiences around prediction topics.

## AI Oracle (AIO)

Multi-LLM verification. Evidence-based fact confirmation. Gemini + GPT + Grok adaptive consensus.

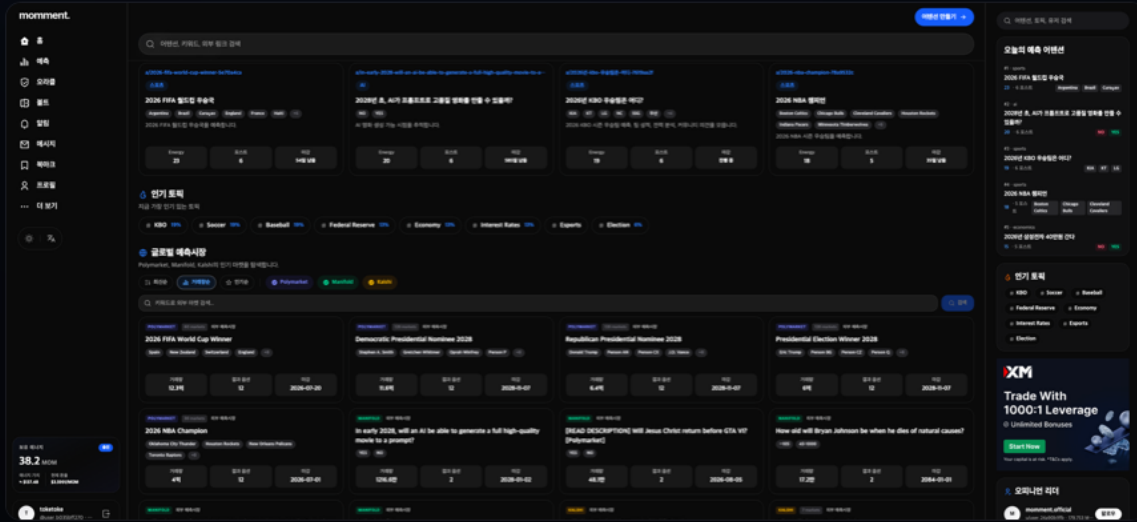

## Reward Economy

MOM Energy rewards. Vault revenue sharing. Ad/sponsor revenue flows back to contributors by Contribution Ratio.

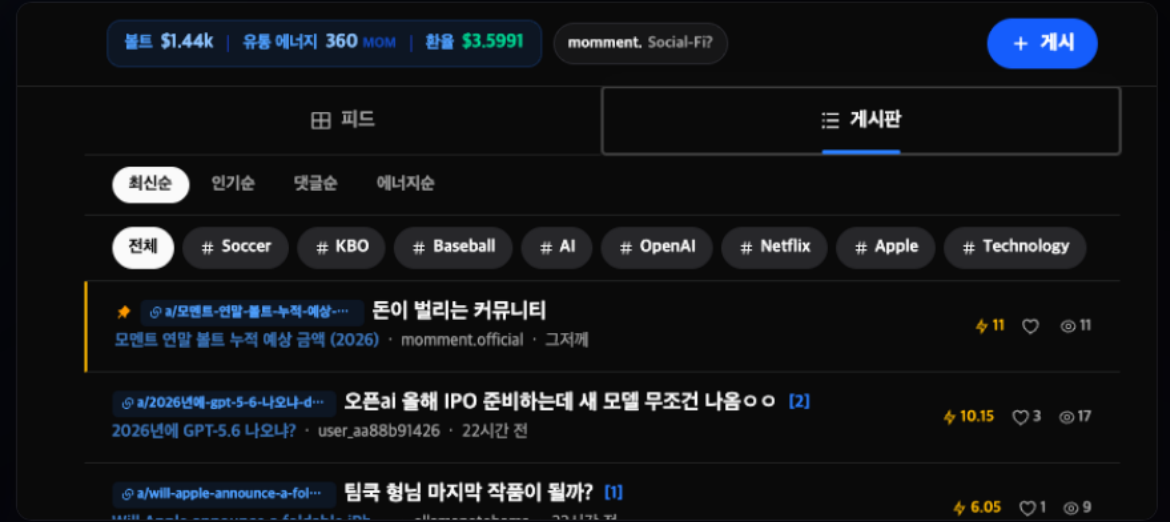

### LEGAL

momment. is an Event Attention SocialFi platform — not a prediction market. No real-money betting. AIO bonds are honesty deposits, not wagers.

# Already built. Already running.

FEED - Community Posts + Energy Rankings

## What the LLMs Actually Verify

CHECK	QUESTION
RELEVANCE	Is this article related to the claim?
SUPPORT	Does the article actually support the claim?
RECENCY	Is the article recent enough to be valid?
CONSISTENCY	Do multiple sources agree?
STATEMENT	Structured verdict: YES / NO / AMBIGUOUS

### Evidence Lite — No Copyright Risk

Full article text is never stored. Only metadata + content hash + screenshot thumbnail. Proves "this content existed at this URL at this time" without reproducing copyrighted material.

### Full LLM Provenance

Every verification is fully transparent and auditable — unlike UMA's blackbox bot.

```
// On-chain record for every verification
model_id: "gemini-2.5-flash"
prompt_version: "verifier-v1.2.0"
prompt_hash: sha256:abc123...
input_hash: sha256:def456...
output_hash: sha256:789abc...
confidence: 95
verdict: "YES"
full_trace: ipfs://Qm...
```

100% reproducible. Same input → same model → same output. Full post-hoc audit possible.

TOKEN ECONOMY

# MOM Energy

Participate more → earn more MOM → MOM value rises as supply burns.

$$$/MOM = Vault USD \div Total MOM Supply$$

## △ MINT — Earn by Contributing

ACTION	REWARD
Write post	+2.0 MOM
Repost / Quote	+1.5 MOM
Comment	+1.0 MOM
Oracle submit (success)	+5 MOM refund + a
Reaction	+0.05 MOM

## ▽ BURN — Deflationary Mechanics

ACTION	BURN RATE
Ad bidding	100% burned
Sponsorship	50% burned
Premium post	15% burned
Withdrawal fee	5% burned

## Platform Revenue → Vault → User Rewards

All revenue flows into the Vault. 90% distributed to users by Contribution Ratio. 10% operations.

### Revenue Streams (All Implemented ✓)

STREAM	MECHANISM	BURN
Ad Slots	Native feed ads + AdSense	100%
Sponsorships	Attention cluster sponsor banners	50%
Premium Posts	Creator-set price, pay to read	15%
MOM Purchase	Direct MOM Energy purchase	→ Vault
Campaigns	Brand-sponsored event missions	Split

### Contribution Ranking

- ★ **Gold — Top 5%** Highest share
- ☆ **Silver — Top 20%** Mid share
- 👤 **Member — Rest** Base share

### Vault Milestones

Withdrawal limits unlock progressively as the Vault grows: Locked → Seed (\$10K) → Early (\$50K) → Growth (\$100K) → Scale (\$500K) → Mature (\$1M) → Open (\$7.5M)

## Polymarket · Manifold · Kalshi — One-Click Import

### What's Built

#### Global Market Explorer

Browse Polymarket, Manifold, Kalshi markets in real-time from /explore

#### One-Click Attention

Import any external market as a momment. attention cluster instantly

#### Real-Time Translation

English markets auto-translated to Korean for local community

#### Market Details

Volume, deadline, options — all displayed without trade execution

### Why This Matters

Korean events are traded on Polymarket — but there's no trusted oracle to verify them. momment. becomes that verification infrastructure through social discussion + AI oracle.

### Legal Boundary

momment. never provides buy/sell buttons, order routing, or fund custody for external markets. Users discover events and discuss — actual trading is their independent decision on external platforms.

NO ORDER ROUTING

NO FUND CUSTODY

NO TRADE EXECUTION

## Korean Oracle Data = Global Blue Ocean

Data that only Korea can produce accurately. UMA voters structurally cannot handle this.

CATEGORY	KEY DATA	GLOBAL DEMAND
K-Culture	Melon/Genie charts, K-pop comebacks, drama ratings, awards	Polymarket, Opinion, Myriad, streaming analytics
K-Finance	KOSPI/KOSDAQ, BOK rates, DART filings, CPI	Macro hedge funds, DeFi protocols
K-Sports	KBO, K-League, LCK esports, Korean athletes abroad	Sportradar supplement, sportsbooks
K-Politics	Elections, polls, National Assembly bills	Polymarket, Kalshi, political analysts
K-Corporate	Samsung/SK/Hyundai earnings, M&A, executive changes	Investment banks, crypto markets
K-Public	Gazette, court rulings, FTC decisions	LegalTech, B2B contract settlement
K-Society	Real estate prices, weather/disaster, CSAT results	Parametric insurance, real estate tokenization

Korean language data = a domain UMA voters structurally cannot handle → **zero competition blue ocean.**

## Traverse — Korea's Most **Compliant** Builder

Traverse builds the most creative yet compliant products in Korea's blockchain space. Our KYT capabilities have been recognized by Dunamu and industry leaders.

We've studied Polymarket + UMA's strengths and weaknesses, Korea's regulatory landscape, and the legal boundaries — to build a **Multi-LLM Agentic Oracle** and a **Social-Fi structure that eliminates speculation risk**.

"We believe every product we build can become the global leading standard. In that sense, we're the team most aligned with GIWA's vision."

### Core Capabilities

#### **KYT / Compliance**

Industry-recognized by Dunamu. Built compliant infrastructure in Korea's strictest regulatory environment.

#### **Multi-LLM AI Pipeline**

Adaptive 2+1 oracle. Gemini + GPT + Grok. Evidence verification at \$0.016/call.

#### **Full-Stack Product**

30+ pages shipped. Social feed, prediction, oracle, vault, economy — all live on testnet.

#### **Legal Architecture**

Event Attention SocialFi positioning. No gambling classification. Contribution-based rewards.

## Phased Growth — with GASOK

### Phase 1 — Core ✓

30+ page SocialFi app. MOM Energy + Vault economy live. Adaptive 2+1 AI Oracle. Polymarket/Manifold/Kalshi integration. 4-stage recommendation algorithm. Giwa Sepolia mUSDC withdrawal.

### Phase 2 — Growth

Giwa mainnet AIO on-chain records. User acquisition + community activation. Ad/sponsor revenue ramp. K-Culture + K-Sports data focus.

### Phase 3 — Scale

Institutional verifier nodes (media consortium). B2B data licensing. Multi-language expansion (JP, CN). Cross-chain data supply.

## Origin Story

### BEFORE

"Model that doesn't work without media consortium" → Dependent, can't scale

### NOW

"Model that works with AI alone" → Independent, instant scale. Institutions join later as trust layer upgrades.

THE ASK

# Building Korea's most **compliant** prediction platform — **with GIWA.**

## Mainnet Onboarding

AIO on-chain + Vault mUSDC settlement

## Technical Support

EVM compatibility, RPC optimization

## Ecosystem Access

Oracle data supply to Giwa DApps

## Grant / Investment

Runway to user acquisition + first B2B deal

The most compliant, yet most impactful.  
The project most aligned with **GIWA** — **moment**.
